

Satisfy Requirements & Improve Cybersecurity with our Cyber Insurance Stack

When cybersecurity insurance underwriters review your business, they have to evaluate and mitigate your existing risk. The more you can demonstrate you are taking key measures to protect your organization from ransomware, the better your chances of getting coverage with affordable premiums will be. Insurers look to see if you have in place several core baseline best practices: multifactor authentication (MFA) across systems, immutable backups, ongoing employee security awareness training that includes phishing prevention exercises, and managed detection and response (MDR) to protect your endpoints.

The CISO Global Basic Cybersecurity Stack offers services designed to ensure you meet these requirements, and we can customize our offerings to what you need.

MFA: Multi-factor Authentication

CISO experts will:

- Help you configure MFA in platforms where it's already available
- Train your teams on why and how to use it
- Identify and implement additional solutions as needed

Immutable Backups

CISO experts will:

- Evaluate your current backup strategy
- Identify security gaps that allow attackers to access your backups
- Help you align backup strategy to meet your unique recovery time objective

Staff Cybersecurity Awareness & Phishing Prevention Training

CISO's fully managed training program includes:

- Quarterly simulated phishing attacks
- Monthly security awareness training emails
- Custom-selected training videos tailored to strengthen any identified weak areas over time
- Reporting on success and growth among staff over time
- Assurance you won't waste resources on another ineffective awareness training subscription

MDR: Managed Detection and Response

CISO's MDR solution will:

- Stop endpoint attacks, even when endpoints are offline or outside your company network
- Provide 24x7x365 security monitoring and full response
- Go beyond alerts, with custom playbooks and automation to speed up processes
- Ensure all your system's security alerts are handled within minutes
